

[illegible]

$$\Rightarrow d' d = \left[ \frac{2}{4+15} \right] d d_m$$

$$k+1 \leq \sum_{i=1}^k c_i$$

$$p = \sqrt{\frac{2}{t+2}}$$

$$d = \sqrt{\frac{2}{2+1}}$$

$$C^2 \subseteq C^{l+1}$$

$d = \sqrt[n]{c+1}$  wenn  $c > d$   $d = \sqrt[n]{c+1}$  wenn  $c < d$

$$A = \sqrt{2+2} \text{ m}$$

$$\text{Also } c_{t+2} \geq 2c_{t+1} / \cos \theta \sqrt{c_{t+1}} \geq 1.4 \sqrt{c_{t+1}}$$

Minimale Ordnungsproz.  $I = \{x \in A : \text{ist } \emptyset \in N \text{ zu } x \in \emptyset\}$   
ist nicht ne., a. z. einem Spalten I  $\Delta$

Just think me, a warm sportsman I do.

3. Die dom.  $\varphi(x_0, \dots, x_n) \triangleq \text{true}$ ,  $p \in \mathcal{P}_1$   $I \models \exists x_1 \dots \exists x_n \varphi(x_1, \dots, x_n)$  in the

$$u^T (u^T x - 1) x^T d) + u^T x - x^T A u^T E = 1 \quad I$$

$$A \mid \Rightarrow \exists x_1 < C: A x_1 \wedge \dots \wedge (p(x_1) \wedge \dots \wedge \neg x_n)$$

(Himmelschein)  $\text{H}_2\text{NCOOH}$  no open ring

Information (discovery)

$p < c_0$  Writing under the line

$$(v_{\max} - 1/2x/2b) \cdot e^{2\lambda A} \equiv 1 \quad v_b > v_a$$

$$\text{Ans. } I = \sqrt{x_2} \sqrt{x_3} = \sqrt{x_2 x_3} \quad \text{--- (1)}$$
